

A 2D coordinate system with a grid. A green vector x starts at the origin and points to the point (2, 5). A blue vector 1 starts at the origin and points to the point (1, 1). A gray line passes through the origin and the point (1, 1). A dashed line segment connects the tip of x to the gray line at a right angle, indicated by a blue square. The angle between x and the dashed line is labeled θ . The angle between the positive x-axis and 1 is labeled α .

$$x = (2, 5,)$$

 θ $\mu 1$

$$1 = (1, 1,)$$

 α
